1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Kien Le on 6/12/09.

The application has been amended as follows:

Claim 8. A filter device for suppressing electromagnetic interference generated in an alternating current load connected to a power converter which has a direct current input and an alternating current output, the filter device comprising: a common mode choke connected to said direct current input of the power converter; and a connecting element that connects the neutral point of the alternating current load to a reference potential point having little potential variation at a direct current power source side of the common mode choke wherein the connecting element includes a capacitor and a resistor connected in series between the neutral point of the alternating current load and the reference potential point; and wherein the connecting element further includes a line between the capacitor and the resistor to electrically connect the capacitor and the resistor in series, and wherein said line is entirely ungrounded.

Claim 9 has been canceled.

Claim 11. A filter device for suppressing electromagnetic interference generated in an alternating current load connected to a power converter system, said

power converter system including a first power converter with an alternating current input and a direct current output and a second power converter with a direct current input and an alternating current output, the filter device comprising: a common mode choke connected to and between the direct current output of the first power converter and the direct current input of the second power converter, the alternating current output of said second power converter being connected to the alternating current load; and a connecting element that connects a neutral point of the alternating current load to a reference potential point having little potential variation at an alternating current input side of the first power converter wherein the connecting element includes a capacitor and a resistor connected in series between the neutral point of the alternating current load and the reference potential point; and wherein an electrical connection between the capacitor and the resistor has no branches so that, in operation, the same current flows through both the capacitor and the resistor.

Claim 12 has been canceled.

2. Claims 1, 3-5, 7, 8, 10, 11, 13, 14 and 16-23 are allowed.
3. The following is an examiner's statement of reasons for allowance: None of the prior art of record disclose or teach a common mode choke connected to a power converter, a connecting element which includes a capacitor and resistor connected in series between the neutral point of the alternating current load and the reference potential point and the capacitor and resistor midpoint not grounded.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Adolf Berhane whose telephone number is 571-272-2077. The examiner can normally be reached on Monday- Friday 8 AM to 6 PM.
